Admission

M.Sc. Interdisciplinary studies in

environmental, economic, and social sustainability

UAB Barcelona

Recommendation

I have known Beverly Felten for four years, and my personal impression of her is mainly based on her activities as a student in our undergraduate courses in geology, particularly in the courses "Geological Mapping" and "Field Methods".

Beverly Felten is a highly motivated, mature student in our BSc programme Georesources Management with an outstanding initiative and the ability to work independently and productively. The examinations and research reports she prepared were generally of a high standard. Her work has always been careful, critical and up-to-date, with her contributions containing substance. I appreciate in particular that Beverly's scope involves a multi-disciplinary approach showing her broad academic background and potential. I have been furthermore very impressed by her ability and motivation to train herself in new subjects.

Besides her good performance in geosciences, Beverly participated in the project Leonardo (human rights) and is interested in sustainability issues, the environment and sports.

In summary, I am convinced that Beverly Felten will be a responsible and very motivated candidate for the M.Sc. Interdisciplinary studies in environmental, economic, and social sustainability at UAB Barcelona. I fully support her application.

Benvolguts membres de la Comissió de Selecció,

I hope that this letter finds you well. It is with great pleasure and enthusiasm that I write to endorse Beverly Felten as an outstanding candidate for your Interdisciplinary Studies in Environmental, Economic and Social Sustainability Master's Program at the Universitat Autònoma de Barcelona.

Beverly is about to finish her Bachelor's degree under my guidance at RWTH Aachen University in Germany, where she is engaged in an ambitious research project focusing on the detail mineralogical composition of understudied Lower Triassic continental sediments in Svalbard spanning the aftermath of the End-Permian Mass Extinction. Over the course of my academic career, which has taken me across several countries including Switzerland, Norway, Canada, and now Germany, I have had the privilege of instructing and collaborating with many exceptional students who exhibited a profound thirst for knowledge and consistently delivered exceptional research work. Beverly belongs to this group of students.

What distinguishes Beverly is her exceptional proactive approach, resolute motivation, and a rigorous commitment to her research pursuits. I anticipate our future collaborations with great enthusiasm, given her remarkable dedication and abilities. Notably, Beverly has demonstrated exceptional adaptability, swiftly incorporating new concepts and workflows into her repertoire. Her capacity to rapidly and efficiently integrate new knowledge into her work is a testament to her remarkable aptitude for scientific research.

Beverly is driven by a sincere desire to deepen her understanding of the world and apply this knowledge to enhance and challenge existing models. Her intellectual curiosity, active engagement, and interest in both fundamental and applied research are truly commendable. Moreover, she exhibits a strong sense of autonomy and a propensity to take initiative. She consistently follows through on matters that others might overlook and exhibits a level of scientific maturity that rivals even some permanent faculty members at prestigious institutions.

I firmly believe that Beverly possesses tremendous potential to excel as a scientist, even more so if she benefits from taking her Master's degree abroad. I am genuinely excited about her prospects for furthering her career as a valuable member of the scientific community. Her dedication, resilience, and intellectual prowess therefore make her an ideal candidate for your program.

Without reservation, I strongly endorse Beverly Felten to be supported by your program. Her unique combination of skills, motivation, and passion for research will only benefit from being accepted at the Universitat Autònoma de Barcelona.

Should you require any additional information or further discussion regarding Beverly's qualifications, please do not hesitate to contact me. I am at your disposal to provide any assistance you may require in evaluating her application.

Sincerely yours,

Dr Valentin Zuchuat
